In this scene, I focused on assigning the materials I already had ready. I got really used to the hyper shade tool and I feel a lot more confident about using the hypershade and the nodes. I then modeled the extra items, like the table and the ceiling and the walls and floor. I even modeled a rug that I made using curves. After I modeled them I exported the FBX files to substance painter and worked on painting the items. I tried using effects like fur and tiles, but I'm not sure if that went well
