I decided to render both my objects that I made in Maya. I also textured my object in Substance painter.

The reason I rendered both in Maya, was because I wanted to see if I could remember how to set up the raw images and the lights and rendering without looking at the instructions. I got most of it right but still got help. I decided to mess with the lights by adding color. I hoped adding color could help me see the different lights more clearly when rendering. The Color also added a dramatic effect to the render so that was cool.
