I mostly learned how to use the bridge tool during this assignment. I also learned how to make a hole in an object and make the faces work.

I chose to make a square drainage pipe, like the ones seen on the side of people's houses. I was considering making an ally, but a pipe for an ally made more sense than just a few blank walls.

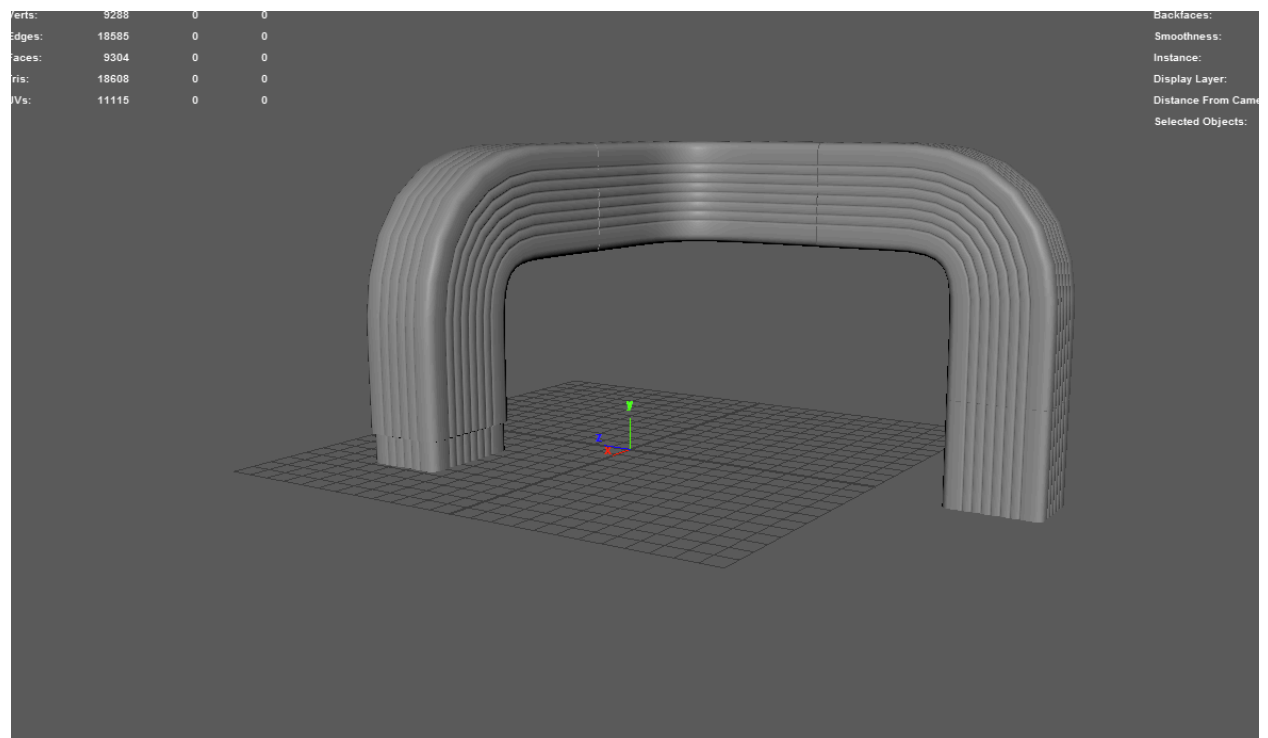

I struggled really hard with the bridge tool, probably because I had too many edges and vertices on the faces I tried to bridge.

With my drain pipe, I used a reference photo that works really well for the size of the pipe, but the part of the pipe that has ridges on all four sides was not very accurate, so I mostly just winged it. Nonetheless, this was challenging in good ways and bad ways.
